General Motors

Campus
7

Please Avoid
Noise Sensitive Areas

**NOT FOR
NAVIGATIONAL USE**

Fly Friendly Procedures

1. Runway 30 is designated as the calm wind runway.
2. Use best rate of climb, consistent with safety and ATC procedures.
3. Runway 12C/30C or 12L/30R for jet aircraft pattern work (1700' AGL) is preferred. When using runway 30C or 30R, start right crosswind turns as soon as practical, preferably before the powerlines (1/2 mile N. of Elliot Rd.) to avoid residential areas north of the airport.
4. On departure, left turn after end of runway to minimize low overflights of the Williams Campus.
5. Jets are requested to use NBAA Standard Noise Abatement Departure or comparable aircraft manufacturer procedures.
6. Propeller aircraft requested to use AOPA Noise Awareness Steps.
7. Helicopter traffic please avoid low overflights of the Williams Campus. Use a Northwest or Southwest arrival-departure corridor.
8. Compliance with fly friendly procedures are at pilot's discretion.

SAFETY ALWAYS COMES FIRST!
